

Ing. Mariano CUNIETTI
CTO and Cloud & Hosting BU Manager, ENTER

Ing. Cunietti works at ENTER as BU Manager for Cloud and Hosting. His role involves responsibilities over product management and strategy, sales, marketing, engineering, support. Over the last years, starting since 2010, he was involved more and more in the Openstack Community, developing two VPS services first, and then (starting 2013) a full multi-region IaaS service. I have a long track record of talks around the world, especially at the Openstack Summits, which I attend since the Folsom release (2012). Today, Enter Cloud Suite is our flagship product. It has achieved several goals: In 2013 it was the first European Openstack based multi-region IaaS; In 2015 it was awarded by the EU to be an official public IaaS provider for EU Institutions and Agencies (tender DIGIT Cloud I) and It was included in the Gartner 2017 IaaS Report as "notable EU provider". He is also involved in an Open Compute Project, aimed to re-engineering the entire hardware platform to be run on open source designed servers, storage and network gear. He strongly believes that open source and collaborative communities can bring a bigger value to projects because of cross collaboration, contamination, and enthusiasm. Before being a manager, he was a Linux sysadmin, managing stuff at an ISP level (DNS, mail, web servers, RDBMS, etc). I liked managing the internals of the Internet, and being part of that change.
